

All Ireland Linguistics Olympiad
The Problem Solvers' Challenge

Interested in studying Computer Science, Language Technology or Linguistics at University?

The All Ireland Linguistics Olympiad (AILO) is a contest in which students must develop their own strategies for solving complex problems in unfamiliar languages. The lateral thinking skills honed by AILO participants are core to career areas such as Computer Science, Language Technology, and (Computational) Linguistics.

Below is a list of undergraduate degree courses related closely to the core skills developed while taking part in the All Ireland Linguistics Olympiad. These courses are offered by the partner universities of AILO organiser the CNGL Centre for Global Intelligent Content.
